

Project Apache Lucene

Task: Codecs components

Scenario: As a developer delving into Apache Lucene internals, your task is to understand the design decisions behind the codecs components. You aim to learn its functionality and grasp its inner workings from components, connectors, and architectural solutions.

Existence

Question 1: What are the components and connectors of the codecs components? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the requirements of the codecs components.

Property

Question 2: What quality attribute and quality attribute solutions (e.g., patterns or tactics) are considered in the design of codecs components? Mention the considered quality attributes and describe the solutions applied, and how they achieve the requirements.

Executive

Question 4: What are the technologies applied in the codecs components, and what is the rationale behind selecting these technologies? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.

Project Apache Lucene

Task: Requirement Performance by Codecs

Scenario: Performance and efficiency is a key quality attribute of Apache Lucene to support fast searching. Understanding how codecs contribute to the efficiency of retrieval in Apache Lucene will provide insight into how Apache Lucene supports performance. You are tasked with exploring the architectural decisions in the Codecs components that enable Performance in Apache Lucene.

Existence

Question 1: What components and connectors in Apache Lucene Codes component contribute to its Performance? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the performance requirements of the codecs components.

Property

Question 2: What solutions (e.g., patterns or tactics) are implemented to support the performance quality attribute in Apache Lucene Codes components? Mention and describe the solutions applied, and how they achieve the requirements.

Executive

Question 3: Which tools and technologies are integrated into Apache Lucene Codes components to support Performance? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.
