

Project Apache Hadoop Mapreduce

Task: Component “Client core”

Scenario: As a developer delving into Apache Hadoop Mapreduce internals, your task is to understand the design decisions behind the Client core component. You aim to learn its functionality and grasp its inner workings from components, connectors, and architectural solutions.

Existence

Question 1: What are the components and connectors of the client core component? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the requirements of the codecs components.

Property

Question 2: What quality attribute and quality attribute solutions (e.g., patterns or tactics) are considered in the design of the Client core component? Mention the considered quality attributes and describe the solutions applied, and how they achieve the requirements.

Executive

Question 4: What are the technologies applied in the Client core component, and what is the rationale behind selecting these technologies? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.

Project Apache Hadoop Mapreduce

Task: Requirement security of “Client core”

Scenario: Security is important for Hadoop Mapreduce. Client core is the interface used by users, for this both security is important. You are tasked with exploring the architectural decisions that support security in Hadoop Mapreduce client core.

Existence

Question 1: What components and connectors in Hadoop Mapreduce client core contribute to its security? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the security requirements of the client core.

Property

Question 2: What solutions (e.g., patterns or tactics) are implemented to support the security quality attribute in the Hadoop Mapreduce client core? Mention and describe the solutions applied, and how they achieve the requirements.

Executive

Question 3: Which tools and technologies are integrated into Hadoop Mapreduce client core to ensure its security? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.
