

Project Apache Tika

Task: Parse document

Scenario:

Tika as a content analysis framework can parse text from a document. Depending on the type of the document, several parsers are considered. Your task is to explore the architectural design decisions that achieve the extraction of text and metadata from a document in Apache Tika.

Existence

Question 1: What are the architectural components and connectors in Apache Tika that achieves parsing documents? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the requirements.

Property

Question 2: What solutions (e.g., patterns or tactics) are implemented to support quality attributes in Apache Tika to achieve parsing documents? Mention the considered quality attributes and describe the solutions applied, and how they achieve the requirements.

Executive

Question 3: Which tools and technologies are integrated to achieve parsing documents in Apache Tika? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.

Project Apache Tika

Task: Performance requirement

Scenario:

The performance of Tika is critical to parse documents in a short time period and with less memory. This is important as Tika is used in developing search engines that require fast responses. Your task is to explore the architectural design decisions that achieve the performance requirements in Apache Tika.

Existence

Question 1: What are the architectural components and connectors in Apache Tika that support its performance requirement for parsing documents? Briefly name and describe each component, determine their type (physical or logical), determine how they are connected, and how they achieve the requirements.

Property

Question 2: What solutions (e.g., patterns or tactics) are implemented to support the performance quality attribute in Apache Tika for parsing documents? Mention the considered quality attributes and describe the solutions applied, and how they achieve the requirements.

Executive

Question 3: Which tools and technologies are integrated to achieve its performance requirement in Apache Tika for parsing documents? Mention the technologies and tools, their associated components, rationale, and how they achieve the requirements.
